

- **QmailMRTG7**

This is a great tool for graphing your mail server's activity.

Info: <http://inter7.com/?page=qmailmrtg7>

Install:

```
cd /var/src/tar
mkdir /var/www/html/qmailmrtg
```

```
wget http://shupp.org/software/qmailmrtg7-4.2.tar.gz
wget http://shupp.org/patches/qmailmrtg7-4.2-cfg.patch
cd ../
tar -xzf tar/qmailmrtg7-4.2.tar.gz
cd qmailmrtg7-4.2
patch -p0 < ../tar/qmailmrtg7-4.2-cfg.patch
make
make install
```

*# Edit qmail.mrtg.cfg and change all instances of FQDN to your hostname*

```
cp qmail.mrtg.cfg /etc/
indexmaker --section=title /etc/qmail.mrtg.cfg >
/var/www/html/qmailmrtg/index.html
```

*# now run mrtg 3 times to get rid of initial cron errors*

```
env LANG=C mrtg /etc/qmail.mrtg.cfg
env LANG=C mrtg /etc/qmail.mrtg.cfg
env LANG=C mrtg /etc/qmail.mrtg.cfg
```

- Add the following line to your crontab  
0-55/5 \* \* \* \* env LANG=C /usr/bin/mrtg  
/etc/qmail.mrtg.cfg > /dev/null
